8.1 Pick's theorem

For a polygon:

A: The area of the polygon

B: Boundary Point: a lattice point on the polygon (including vertices) I: Interior Point: a lattice point in the polygon's interior region

$$A = I + \frac{B}{2} - 1$$

Graph Properties 8.2

- 1. Euler's Formula V-E+F=22. For a planar graph, F=E-V+n+1, n is the numbers of components 3. For a planar graph, $E\leq 3V-6$

For a connected graph G: I(G): the size of maximum independent set M(G): the size of maximum matching Cv(G): be the size of minimum vertex cover Ce(G): be the size of minimum edge cover

4. For any connected graph

(a)
$$I(G) + Cv(G) = |V|$$

- $\text{(b)} \ M(G) + Ce(G) = |V|$
- 5. For any bipartite:
